About panagenda

Customers in **over 70 countries**

run more than **14 million licenses**

of our solutions.

About panagenda

We help our customers to ...

... **be more efficient.**

... **reduce manual effort.**

... **save cost.**

Agenda

- **Consolidation**
as the foundation of transformation
- **Key Questions**
in your transformation project
- **Nomad (Web)**
limitations and considerations

Consolidation

as the foundation of transformation

Your Notes/Domino environment ...

... has grown over **many years or even decades**

... has had many admins and developers

... has seen more re-organizations
than most of your current staff

Whatever your challenge ...

- Modernization
- Migration
to the Cloud
to a different platform

... in the beginning **you need answers** to the same questions.

The Meta-Questions

- Which databases are unused and can be archived?
- For which applications do I have easy paths forward?
- What can be turned off asap? (license cost impact)

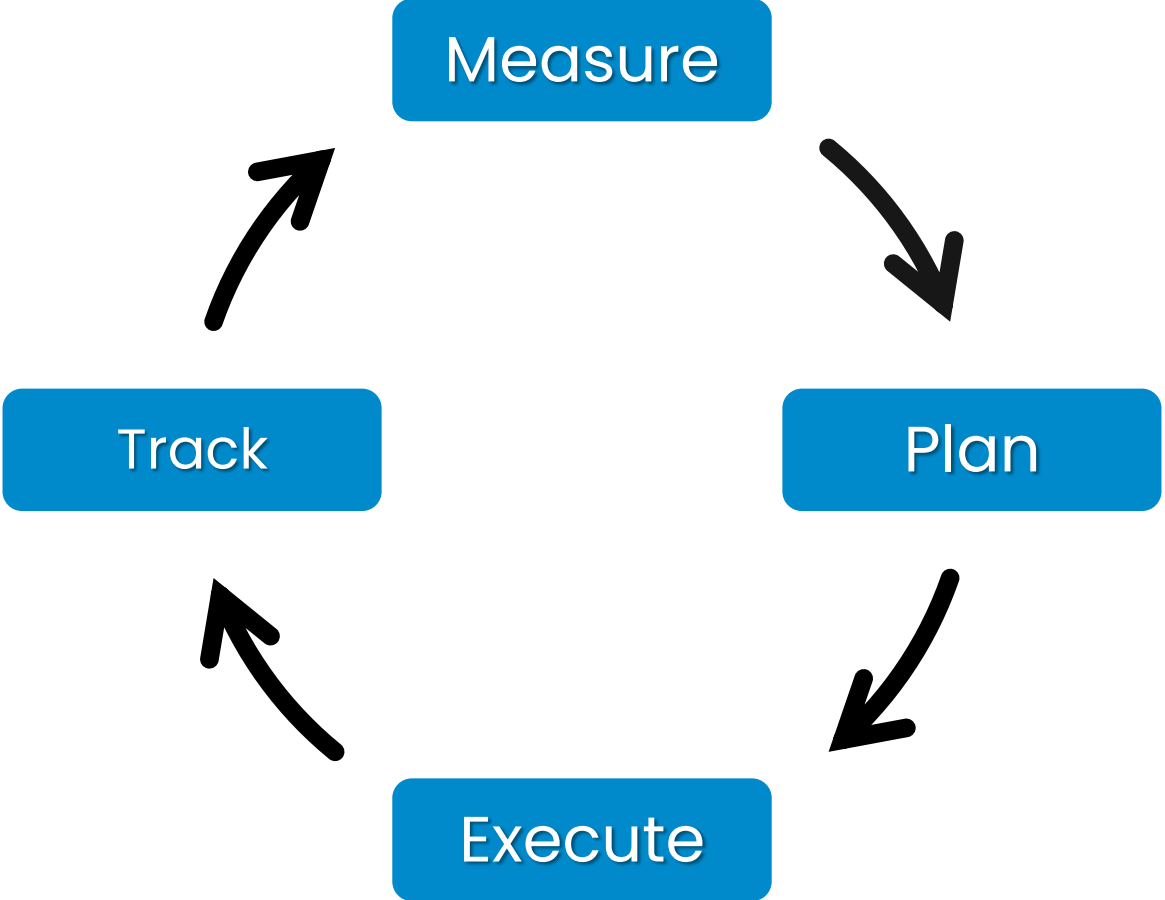

What helped us in projects

The right **Perspective**

A **Framework** to measure progress in

A good **Starting Point**

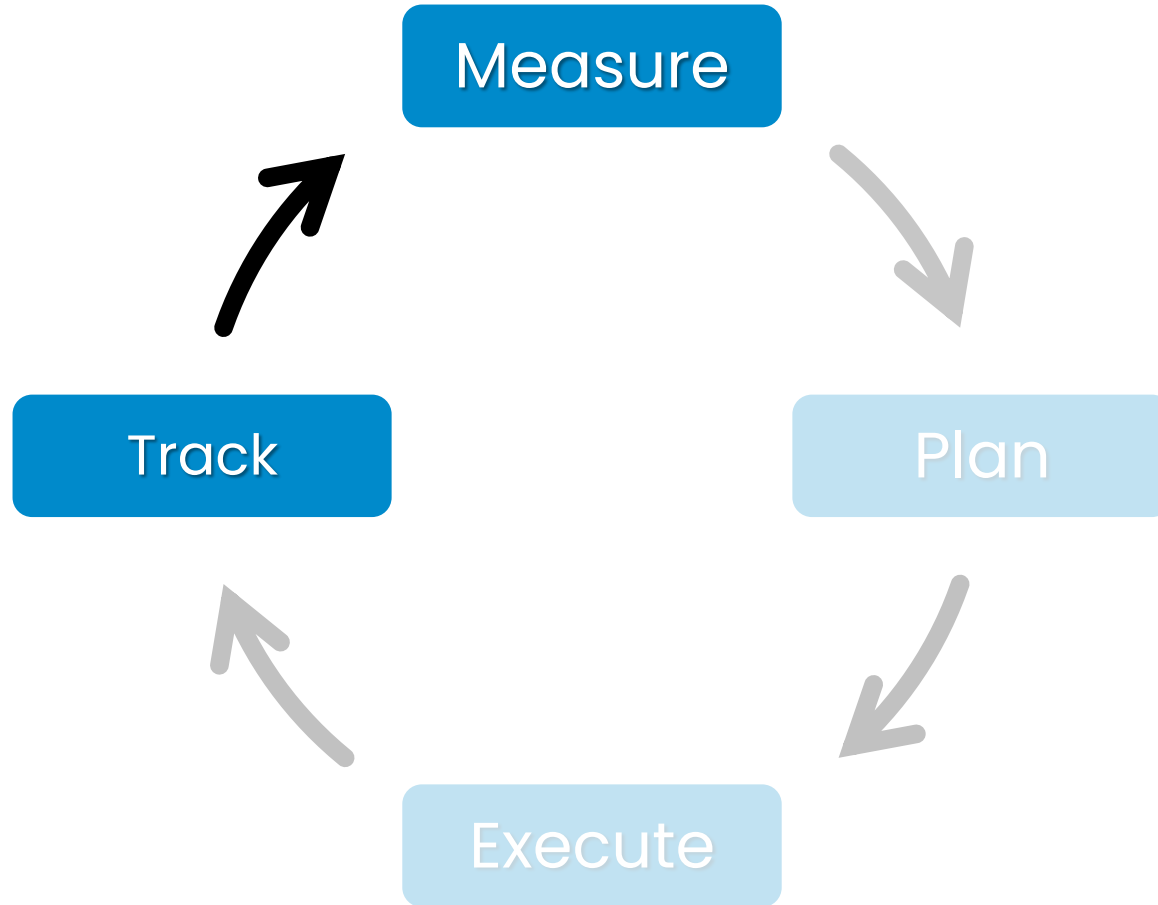

The ongoing process

Key Questions

in your transformation project

KPIs are your friend

A few terms to define

“Unused Apps”

Replica Sets (RS)

Unused DB instance vs unused RS

Observation period matters

A few terms to define

“Inactive Users”

Relevant vs irrelevant applications

Role/department matters

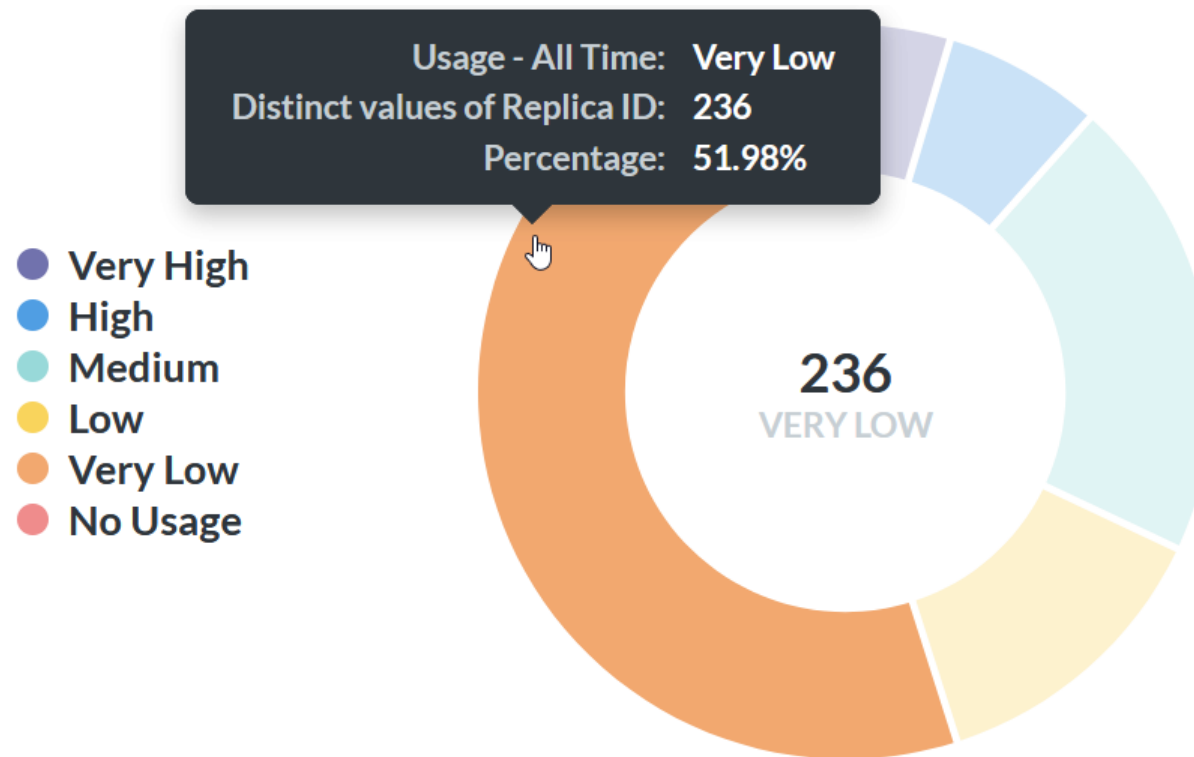

Application KPIs

Which/How many DBs can be excluded from my project?

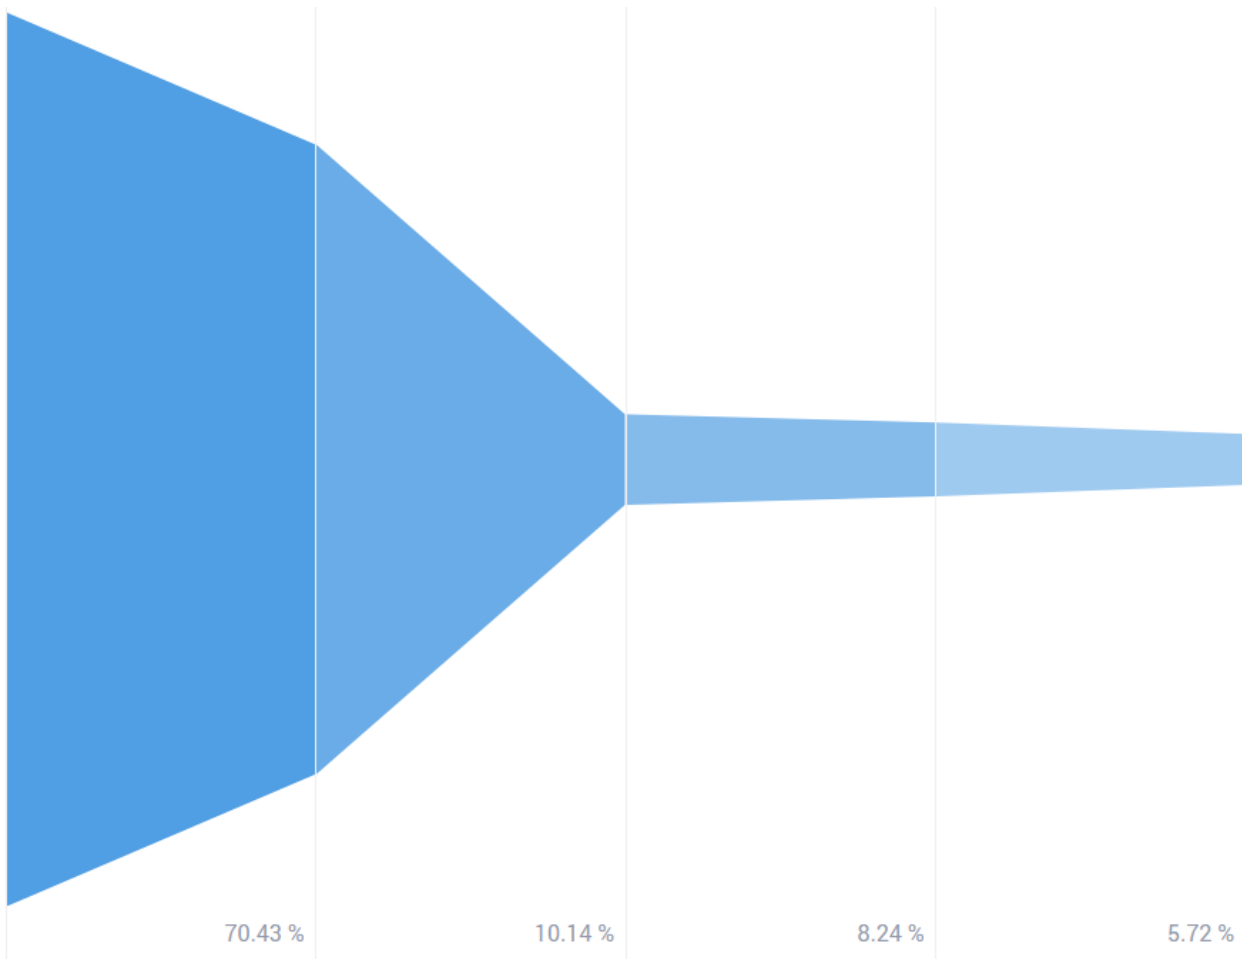

Database Type	DB Instances		
	Discovered	Used	%
■ Application	6,397	2,972	46.5%
■ Mailin DB	792	364	46.0%
■ Orphaned User Mail	11,897	1,117	9.4%
■ System DB	55,829	4,975	8.9%
■ User Mail	111,836	78,877	70.5%
■ Mailbox	412	226	54.9%
■ Directory	3,133	1,911	61.0%
Total	190,296	90,442	47.5%

Application KPIs

Which DBs are unused and can be decommissioned?

Application KPIs

1%-5%

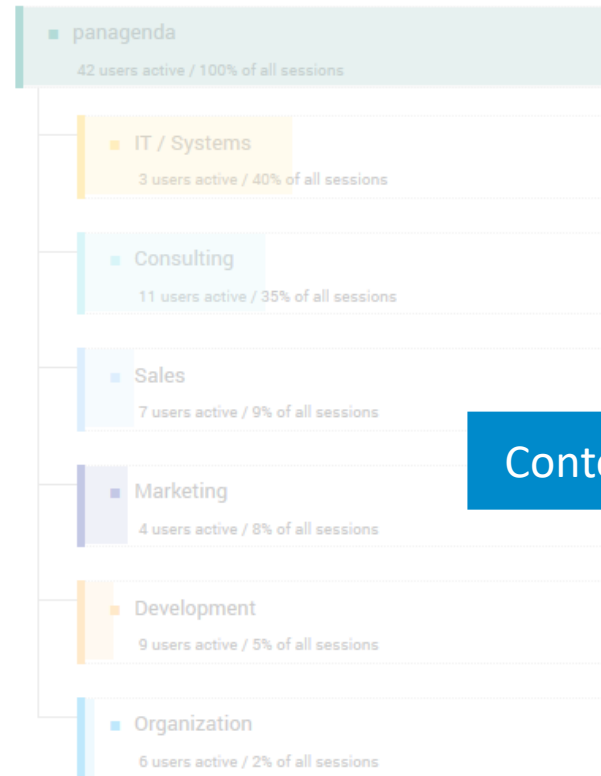

Application KPIs

How many users are active per database?

Identify stakeholders

Sort Tree by Sessions Total ▾

Content Creators

Activity Overview

User List

Consumers

Database Activity
Read Only Sessions vs. Read/Write Sessions

Last Access: November 15, 2017 (a year ago)
Last Web Access: November 15, 2017 (a year ago)

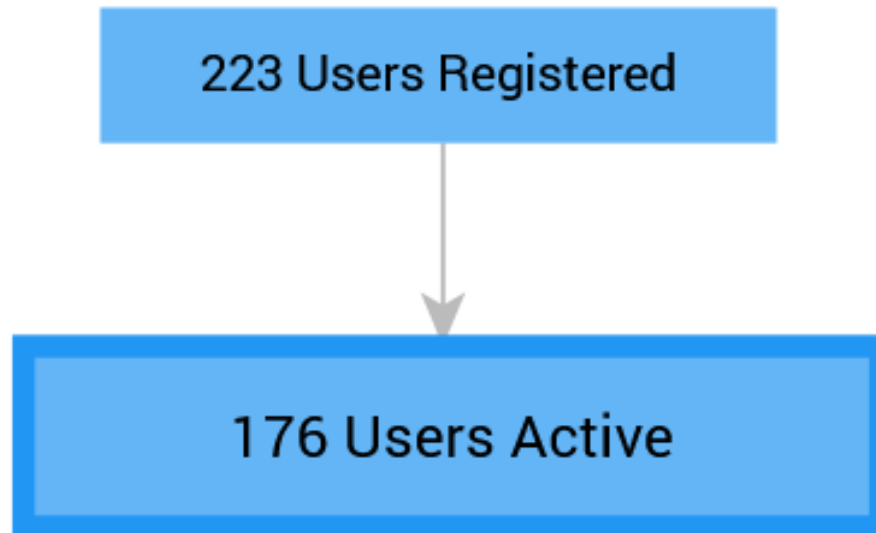

Consulting Sales Marketing IT / Systems Development Organization
Direct Members

User KPIs

How many users are registered vs active?

User KPIs

When were the users last active?

- Less than a month ago
- 1 to 3 months ago
- 3 to 6 months ago
- 6 to 12 months ago
- 1 year ago or before
- No activity

User KPIs

How many applications do my users really work with?

- 100 or more DBs
- 25 to 99 DBs
- 10 to 24 DBs
- 4 to 9 DBs
- 3 or less DBs
- No usage

User KPIs

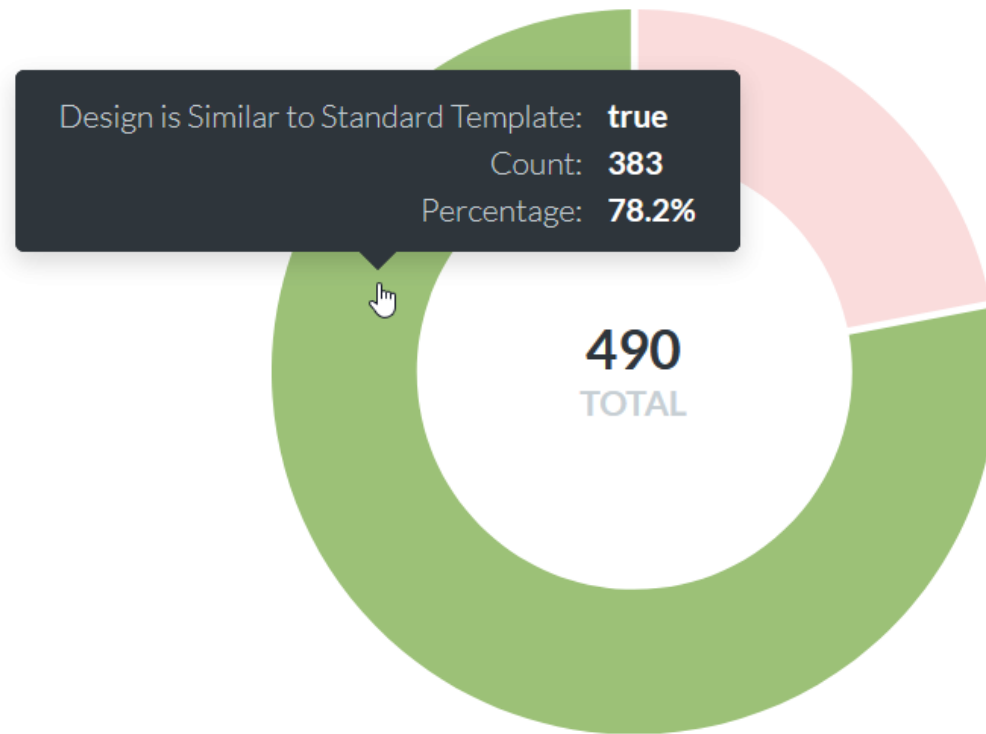

What happens to these numbers after a few iterations?

Continuous monitoring is essential!

Application KPIs

How many DBs are based on standard templates?

Application KPIs

How many DBs have blockers in source code?

Example: Cloud Migration

Hard-coded names

IP addresses, server names, usernames, ...

External interfaces

File system, libraries/DLLs, interfaces to SAP, Fax, ...

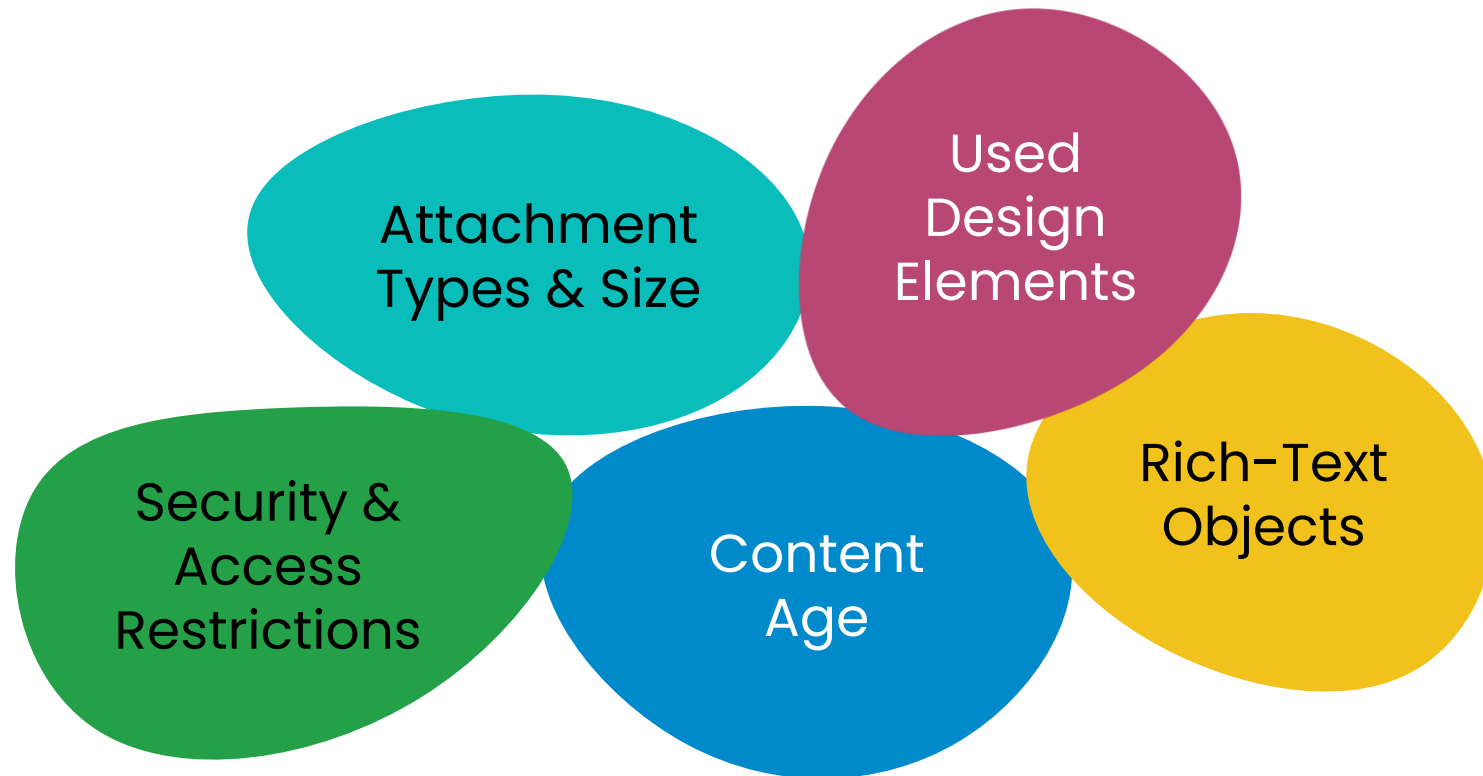

Dependencies on other DBs

Nomad Compatibility

- Java / XPages Code
- C-API calls without platform-specific “Declare”
- ODBC not supported
- 3rd party client extensions
e.g. Adobe for PDF creation

Application KPIs

How many DBs have blockers in content?

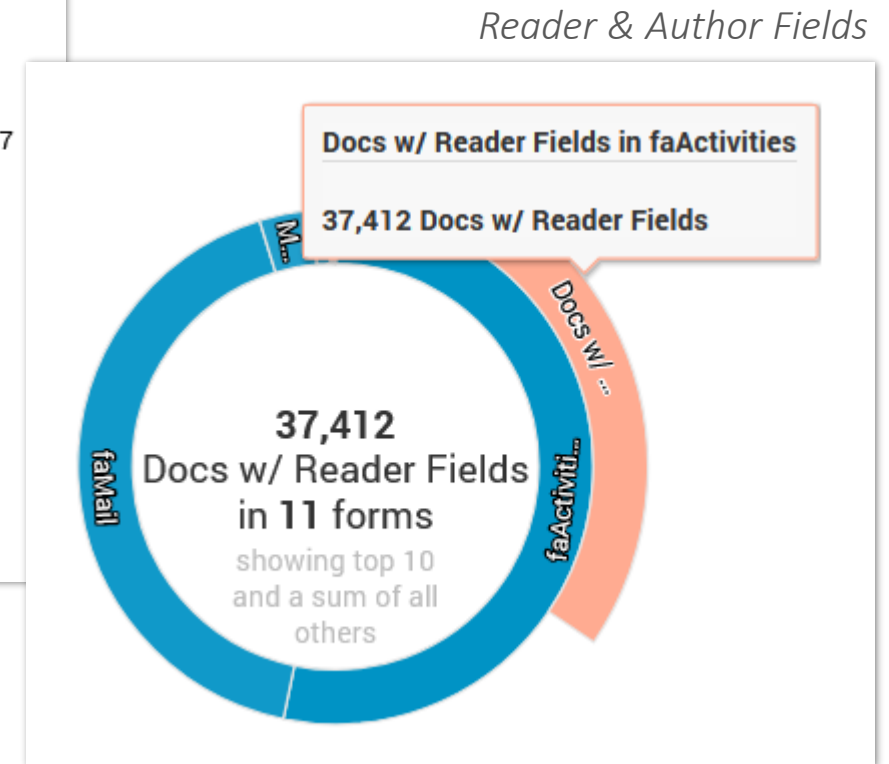

Application KPIs

How many DBs have blockers in content?

Encryption & Signature in Documents

Reader & Author Fields

Server KPIs

- How many servers are active?
- How many databases are being used on a server?
- How many users are active on a server?

Server KPIs

How many servers do I even need after all of that?

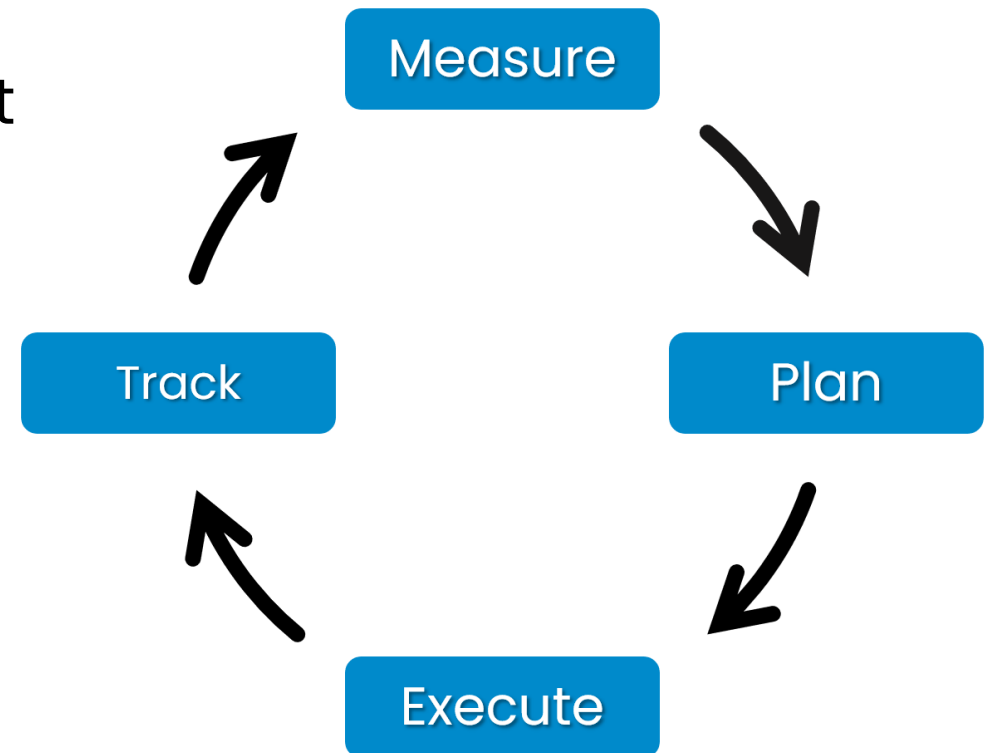

Also consider Domino network design / infrastructure

- Bandwidth still a relevant topic?
- User access method (Notes/Web/Nomad)

Summary

It's an ongoing process

- KPIs are your friends
- Continuous monitoring is important
- Fact-based decisions
- Constant refinement

Thank you!
